

PV LOUVER

DESCRIPTION

The PV Louver is used with PV Pressure Vents to provide an excellent weather and wind seal as well as thermal insulation. The PV Louver also has a free vent area greater than the pressure vent to ensure proper venting of the enclosure.

Light-weight blades are used to reduce the differential pressure resistance and increase the free flow characteristics of the unit.

The PV Louver is sized to match Fike’s PV Pressure Vents in spaces requiring a maximum over pressurization of 100 Pa or above.

SPECIFICATIONS

Vent Size (mm)	Louver Part Number
PV150	n/a
PV300	02-14716-300
PV500	02-14716-500
PV700	02-14716-700
PV1000	02-14716-1000
Unit Finish	
Powder Coat	White (RAL9016)
Items included with PV Louver	
1	Mounting Hardware (Qty. 1 Bag)
2	Installation Instructions
